AnimeOpen 🌸

> **The Ultimate Local Anime Streaming & Library Experience for Desktop**
> Built with Electron, HTML5, Vanilla CSS, and modern JavaScript.

AnimeOpen brings a premium Netflix / Crunchyroll-grade streaming experience directly to your local anime collection. Point it to any folder or hard drive, and it instantly transforms messy video files and `.zip` archives into a gorgeous, high-definition anime universe complete with AniList metadata, voice actor showcases, automated opening skips, offline LAN peer sharing, and theme song playlists.

✨ Features Overview

🍿 Netflix-Style Hero Banner & Continue Watching Shelf

- **Recently Added / Featured Hero Banner**: A cinematic backdrop banner at the top of your library displaying high-resolution artwork, bold title typography, release year, episode count, community ratings, AniList synopses, and a bottom-right "Recently Added" badge.
- **1-Click Hero Resume**: Prominent white pill `▶ Play` button to jump straight into your in-progress episode or launch Episode 1 instantly, plus a glass pill `ℹ More Info` button.
- **Dedicated Continue Watching Carousel**: A Netflix-style horizontal scroll shelf (`overflow-x: auto`) positioned directly beneath the hero banner with real-time percentage progress bars, episode badges, and 1-click resume cards.

📡 Offline Local LAN Peer Sharing (No Internet Needed)

- **Local Network Sharing**: Stream and share anime with friends on the same Wi-Fi or Ethernet network completely offline without internet data usage.

- **Auto Peer Discovery (UDP Multicast)**: Automatically discovers nearby AnimeOpen instances on your local subnet using zero-configuration UDP beacons (`239.255.255.250`).
- **Direct LAN HTTP Streaming**: High-speed, random-access HTTP range streaming directly from your friend's laptop or desktop storage.
- **Peer Library Drawer**: View available LAN peers, explore their shared anime libraries, and start watching with a single click.

⚡ Live Automation & RSS Downloader

- **Real-Time Folder Watcher**: Automatically detects newly added, moved, or deleted video files on your disk in real time with instant library indexing—no need to manually click "Rescan Library".
- **Automated RSS Episode Downloader**: Subscribe to your favorite currently airing anime via RSS feeds (SubsPlease, Nyaa.si). AnimeOpen checks for new episode releases in the background and auto-downloads them directly into the appropriate series folder as soon as they air.

🎨 6 Handcrafted Aesthetic Themes

Switch themes instantly from **Settings** (⚙️) with real-time preview and persistence:

- **Midnight OLED (Abyss)** — Pitch black (`#000000`), cold slate surfaces, and neon pink/violet accents.
- **Cyberpunk Neo-Tokyo** — High-contrast neon cyan (`#00f0ff`) and electric magenta (`#ff0055`) glow.
- **Sakura Bloom** — Cherry blossom dark palette with soft rose petal (`#ff6fa9`) and royal lavender (`#b537f2`).
- **Studio Ghibli Emerald** — Dark forest aesthetic with emerald mint (`#00e676`) and sky cyan (`#00b0ff`).
- **Blood Moon / Akaza** — Obsidian dark with striking crimson red (`#ff2a4b`) and fiery ember orange (`#ff7700`).
- **Vaporwave Sunset** — Twilight violet backdrop with sunset amber (`#ff7b00`) and retro magenta (`#e01a88`).

🎬 Cinematic Streaming Player

- **HTTP 206 Partial Content Streaming (`anime-media://`)**: True random-access streaming allowing instantaneous seeking and skipping across multi-gigabyte video files.
- **Dual-Audio & Subtitle Track Selectors**: Dynamic menus for switching Japanese/English language audio tracks and subtitle streams.
- **Subtitle Sync & Timing Offset**: Fine-tune external subtitle timing (`-0.5s` / `+0.5s` increments) directly within the player controls for out-of-sync subtitle files.
- **Subtitle Styling Controls**: Custom font sizes, font families, text colors, and background/outline opacity for `.srt` and `.vtt` subtitles.
- **Online Subtitle Downloader**: In-player subtitle search and one-click download for missing subtitle files.
- **AniSkip Integration (Skip OP & ED)**: Automatically detects opening and ending timestamps via the AniSkip API. Features an interactive **"Skip Opening"** button and an optional **"Auto-Skip"** toggle in Settings.
- **1-Click External Player Fallback (VLC / MPV)**: One-click button in player controls to instantly launch heavy 10-bit HEVC/x265 videos in VLC or MPV at your exact current timestamp.
- **Instant Screenshot Grabber (`S` Key)**: Captures clean, unscaled video frames with zero UI overlays, copies directly to your clipboard for Discord/Twitter, and saves a PNG to `Pictures\AnimeOpen_Screenshots\`.
- **Cinematic Netflix-Style Intro Bumper**: Iconic AnimeOpen torii portal animation with swirling sakura petals, radiant neon rays, and Web Audio API synthesized sub-bass "Ta-dum" anime impact chord before every episode (can be skipped instantly or toggled in Settings).
- **First-Time User Onboarding Guide**: Comprehensive 6-step visual guide automatically displayed to first-time users, complete with shortcuts and the official developer signature: **Developed by Chisha K Chisha** (re-openable anytime from Settings).
- **Auto-Binge Countdown**: Automatically prompts up-next countdown overlay near the end of an episode to jump to the next one.
- **Speed & Control**: `0.5x` to `2.0x` variable speed playback, Picture-in-Picture (`PiP`), and volume boost.

📚 Smart Library & Metadata

- **Dynamic Folder Selection**: Remembers your preferred anime library folder across launches without any hardcoded paths.
- **AniList HD Metadata**: Automatically pulls HD cover art, banner backdrops, genre tags, synopses, studio information, and community ratings.
- **Manual Metadata & Artwork Editor**: If an obscure anime isn't matched or you want custom art, use the **"🖍️ Edit Details"** tool to set custom titles, covers, descriptions, year, and scores.
- **AniList Rematch Tool**: Built-in interactive search modal to re-link titles to alternative AniList entries.
- **Watch Status Shelf & Tabs**: Filter your library into `All Anime`, `👀 Watching`, `✅ Completed`, and `📋 Plan to Watch`.
- **Missing Episode & Airing Tracker**:
  - Highlights missing episodes in a season (e.g., `⚠️ Missing 2 Episode(s) (Ep 4, 7)`).
  - Displays complete season verification badges (`✓ Complete Season (12/12 Episodes)`).
  - Shows real-time airing countdowns for ongoing anime (`📡 Airing: Ep 8 in 3 days`).
- 🌐 **"Add to My Library" In-App Anime Browser & Torrent Downloader**:
  - **Embedded In-App Browser**: Custom address bar, instant site chips (**Nyaa.si**, **SubsPlease**, **AnimePahe**, **HiAnime**, **Erai-raws**, and **Archive.org**), and custom URL navigation.
  - **Custom Bookmarks & Sites**: Add your favorite custom streaming or release websites with custom titles and URLs, complete with bookmark management and 1-click access.
  - **Built-in WebTorrent Engine**: Directly downloads anime from `.torrent` files and `magnet:` links without requiring external third-party software.
  - **Automatic Series Subfolder Routing**: Automatically parses the clean anime title and saves episodes inside dedicated folders (e.g. `D:\Anime\Frieren Beyond Journey's End\`) so your collection stays organized.
  - **In-App Downloads Manager Drawer**: Track all active and finished downloads with speed indicators (`MB/s`), progress bars, peer counts, and quick "Open in Folder" actions.
  - **Seamless Background Multitasking**: Switch freely between the browser and your library/video player without reloading pages or interrupting downloads. A floating dock pill lets you jump back anytime with one click.

    - **Auto-Indexer**: Automatically re-scans the library when a download completes so newly acquired anime appears with full AniList metadata immediately.
- **Local Cover & Backdrop Caching**: Cover artwork and backdrops are downloaded and cached locally on disk. Even after batch cleaning filenames, re-scanning, or going offline, your posters and visual assets persist permanently.
- **In-App OST Mini-Player**: Bottom audio docking bar with interactive play/pause controls to preview anime opening and ending theme songs with YouTube links.
- **Release Tag Cleaner & Batch Renamer**: Scans and strips messy release tags like `[AnimeKaizoku]`, `[1080p Dual Audio x265]`, and standardizes names into clean Plex/Kodi format (`Series - S01E01 - Episode 1.ext`) with a dry-run preview table without losing your metadata.
- **Streamable ZIP Archives**: Plays anime stored directly inside `.zip` files on demand without manual decompression.

⌨️ Keyboard Shortcuts

Shortcut	Action
`Space` or `K`	Play / Pause
→ or `L`	Seek forward 10 seconds
← or `J`	Seek backward 10 seconds
↑ / ↓	Volume up / down (10% increments)
`M`	Mute / Unmute audio
`S`	Capture Screenshot (Saved to Pictures + Copied to Clipboard)
`N`	Next Episode
`P`	Previous Episode
`[` / `]`	Adjust Subtitle Timing (-0.5s / +0.5s offset)
`F`	Toggle Fullscreen
`Esc`	Exit Fullscreen / Close Player

🛠️ Development & Building

Running Locally

```
npm install
npm start
```

Creating Windows Installer (.exe)

```
npm run build:win
```

The output installer (`AnimeOpen Setup 1.0.0.exe`) will be generated inside the `dist/` directory.
